

ThreatDown Browser Phishing Protection

Easily deploy and configure browser phishing protection from the single console that manages the entire ThreatDown portfolio.

Overview

The threat of phishing has extended beyond email to the browser. And malvertising, including malware in online ads, is on the rise. So, organizations are adopting web protection against these threats. However, many solutions are limited, require manual processes, and are not fully integrated. These limitations result in incomplete protection and visibility into browser activity and the attacks that arise from them.

Organizations need simple and effective web protection against malicious sites, malware, and unwanted ads. ThreatDown Browser Phishing Protection extends our cloud-based ThreatDown security platform to keep your end users' web usage safe and productive.

ThreatDown Browser Phishing Protection Advantages

-  **Protect against browser-based phishing attacks** : Use heuristics and signatures to block malicious phishing sites, unwanted ads, tracking scripts and scams.
-  **Reduce complexity**: Utilize the same lightweight agent and the same console to deploy and configure browser phishing protection, as well as the rest of the ThreatDown solution. Gain control and visibility into browser activity.
-  **Enhance productivity**: Stop intrusive ads and tracking scripts to increase browser speed and employee productivity.
-  **Support regulatory mandates**: Monitor browser activity and stop phishing attacks to meet compliance mandates aimed at safeguarding the privacy and data of end users.

Industry Accolades and Peer Reviews

ThreatDown is a leader in security efficacy and customer support as rated by third-party customer reviews and independent rating organizations.
